

Kai Breakout

Revision History · newest at top

Version	Date	Summary
v12	May 25, 2026	Akhil ball SLOWER (9.3 → 7.6) — constant homing made the v11.1 ball feel faster than older versions; this restores the old perceived pace. Akhil collision priority FIXED: damage non-steel bricks first, skip the steel check if we damaged one this tick — kills the 'steel clang sound + brick not breaking' oscillation between adjacent steel + tough bricks. Akhil-steel angle randomization: $\pm 20^\circ$ rotation on each steel hit so the ball doesn't bounce back-and-forth into the same steel from the same angle. Mode HUD pill shifted up (y 36 → 22 when no boss) so the bottom edge no longer touches the top brick row. Boss music transitions FIXED: when Big G dies with a mode active, that mode's music starts back up (was leaving silence); no-mode case still restores chill. Big G hit 'ghost image' artifact REMOVED — was the random flinch-teleport flashing her at a different position for one frame before figure-8 update snapped her back. Now she stays on the figure-8 path; sparks + hit sprite + screen shake carry all the impact. Revived TOUGH bricks now also use the purple cursed palette + pulsing border + sparkles (was showing original color tint). BIG G HAS ARRIVED! purple stroked banner during the intro state — fade-in/hold/fade-out, gentle scale pulse. Ball is fully frozen during the boss intro so the player can't lose during the entrance cinematic. On level 7 she now waits to spawn until the ball is launched (carryover from round-2 polish, calling it out explicitly). sw.js CACHE_VERSION bumped to v12 — required to invalidate stale service-worker caches on already-installed clients.
Version	Date	Summary
v11	May 24-25, 2026	BIG G BOSS FIGHT (Akhil's mom Geetanjali). 15 HP, 3 phases, revives bricks, fires purple orbs at paddle (phase 2+). Auto-spawns level 7 + manual '0' / 5s logo long-press. Akhil-meets-mom reaction: ball grows + 'Mom?!' bubble. Akhil+steel redesigned with per-session blocklist + force-redirect on repeat hits + 3-strike teleport failsafe. Polish pass: HP bar in top band (y=8-32, never overlaps bricks), 'BIG G' label pixel-stroked, ouch shake on hit (frozen while paused). Mode HUDs shift down to y=60 with dark pill background when boss is active. Sprite 20% bigger (face readable on phone). Constant purple shadowBlur halo. Removed source-atop white-square artifact; now 14-particle purple energy burst + 4 trailing sparks + brightness boost via ctx.filter. Elaborate entrance portal: rotating gradient void + 5 thick rings + 8 crackling lightning bolts + edge vignette + drop-in from above + overshoot. Get-ready audio beat before sting. Revived bricks clearly CURSED: purple gradient base, pulsing border with glow, rune hatches, drifting sparkles. Ghost-to-solid: 18-spark burst + twinkle SFX + 10-frame scale bounce. Cast visible: crackling wand beam to ghost brick + 16 bright sparkles drifting along. Boss music PRIORITY: chill + mode music silenced when boss active; gameplay still works. Chill restored on death. Paddle stun bumped to 1.2s,

Version	Date	Summary
		blocks key/touch/MOUSE motion, no fillRect overlay (was creating PAPA-paddle purple block artifact). 'Tink' SFX on invuln hits. Phase-shift sting + purple flash at 66% / 33% HP. Boss death: +50 per revived brick (staggered popups) + flat +1000 BOSS BONUS. No revival while ball is stuck on paddle. Cinematic state cleared on level transition (no banner bleed). Pause disabled during cinematic. Items + manual summon blocked during 1.75s boss intro. Round-2 polish: Big G now waits to spawn on level 7 until the player launches the ball (no longer fires 600ms after the intro card). Boss collision rewritten with MIN-OVERLAP resolution — fixes 'ball teleports up through bricks' when boss slid into ball (old directional nudge pushed ball into brick row). Akhil-vs-steel logic SIMPLIFIED: no more blocklist / repeat-hit counter / failsafe teleport — on steel hit, min-overlap nudge ball out + brief 10-tick drift + re-pick target preferring one whose line doesn't cross the just-hit steel. No more stuck-on-same-steel loops or teleports. Mode HUD pill background now ALWAYS shown (consistent with-or-without boss). BIG G label bumped to 18px and moved to the LEFT of the bar (was small 12px above). BLOCKING FIX (pre-push): setupBigGSummon IIFE referenced logoEl before its const declaration — TDZ ReferenceError crashed the script at load. Converted to a named function called after logoEl is initialized.
v10	May 19, 2026	Akhil ball: stronger anti-stall (3-strike escalating recovery, failsafe teleport to open sky after ~1.5s stuck). Title footer: JS-driven wrap detection — bullet only shows when ARR is inline with the rest. High-score flash auto-dismisses when level-complete or endgame popups open (no overlap). Commit title now carries the version number.
v9	May 19, 2026	Akhil unstuck: line-of-sight target selection through steel + stagnation watchdog. Title footer one-line when room, two-line with no leading dot when narrow; matched inline-dot spacing. New-high flash moved to mid-canvas (below bricks). Paddle hit SFX louder. GAME OVER keeps red title even on new high — added gold pulsing 'NEW HIGH SCORE!' badge instead. Reset-hi-score confirmation modal +30%.
v8	May 18, 2026	Akhil mode: +15% homing speed, -30% bounce distance, steering forces curve the ball around steel bricks. MAD MAMA explosions: screen-shake with chain-count scaling. PWA: service worker (sw.js) for offline play and instant cache loads. Per-level intro card (LEVEL N fade in/out, ~1.3s). Paddle hit SFX (woody 'thock'). High-score break flash (gold banner + stat-box pulse). Hold-the-HI-SCORE-5s to open reset confirmation modal. Touch paddle: id-tracked drag (immune to logo taps) + distance-scaled speed. 'BRICKS SCORE' label on level complete. Combo callout enlarged (only at x2/x3 thresholds). SuperKai item: bigger, papa-style green glow. Item-spawn 60s timer freezes while ball is on paddle.

Version	Date	Summary
v7	May 18, 2026	Win screen: CONGRATULATIONS! card now sits in front of the firework bursts (z-index fix). Level-complete popup: larger BRICKS/BONUS/TIME/TOTAL text, +25% longer count animation, denser tick blips. Paddle control area extended below the canvas (X bounded by canvas edges). All inputs locked while paused or pre-launch. Falling items +15% speed. Logo tap cycle wraps past 5 (no auto-Nozomi at exact 5). iPhone title screen: portrait copyright no longer clipped, landscape logo bumped and footer no longer crashes the START button.
v6	May 18, 2026	Logo activation feedback split: small 'tap' pulse on each touch, bigger 'fire' pulse + dah-ding chime when an item commits. Title screen: BRICKS · BALLS · POWERUPS forced to one line; copyright '© 2026 · A PAPA & KAI PRODUCTION' stays paired; phone-landscape logo bumped to 70vh. Bigger PAUSED canvas text and 'PRESS SPACE OR CLICK TO LAUNCH' wording on one line. Webapp icon updated (transparent border trimmed) and switched to apple-touch-icon-precomposed.
v5	May 18, 2026	Pause button (top-right canvas corner) wired across mouse, keyboard, and touch. Procedural level-clear and game-win jingles. Score-counter tick sounds during number rolls. +10% launch ball speed. Title screen now works in portrait. Separate orientation prompts: phone-rotate vs. desktop widen-window. iPad-mini standalone cutoff fixed. apple-touch-icon uses webapp icon.png. Sidebar logo can be tapped 1-5 times to spawn power-ups (touch-testing aid). Bottom hint strip removed.
v4	May 17–18, 2026	Brick hit SFX restored in SuperKai (extras) and Nozomi modes. Level-complete jingle longer / more celebratory with a pause before the score-counter starts. Win jingle expanded to ~4s with sub-bass and cymbal swell. Akhil mode: +25% homing speed, ball-velocity restore on mode end now uses the current level's speed (no more 'feels like level 1').
v3	May 17, 2026	PAPA mode (custom paddle skin) and AKHIL mode (homing yellow ball) added. 7-level progression with tough (2-hp) and steel (indestructible) bricks. GitHub Pages deployment so the game is playable at a public URL.
v2	May 15–16, 2026	Nozomi mode (snake paddle, pass-through ball). MAD MAMA explosion mode (radius destroys neighbors). SuperKai multi-ball mode. Per-mode music, full power-up item system (heart, bomb, superKai, papa, akhil).
v1	May 13–14, 2026	Initial Kai Breakout build: HTML5 canvas, kaiball-as-ball, paddle, multi-row brick wall, lives + score, basic combo multiplier, retro arcade visual style.

Version numbers match the `CACHE_VERSION` string in `sw.js`. Pre-v8 entries were back-filled retroactively after that file was introduced.
